

PRATICAL 1

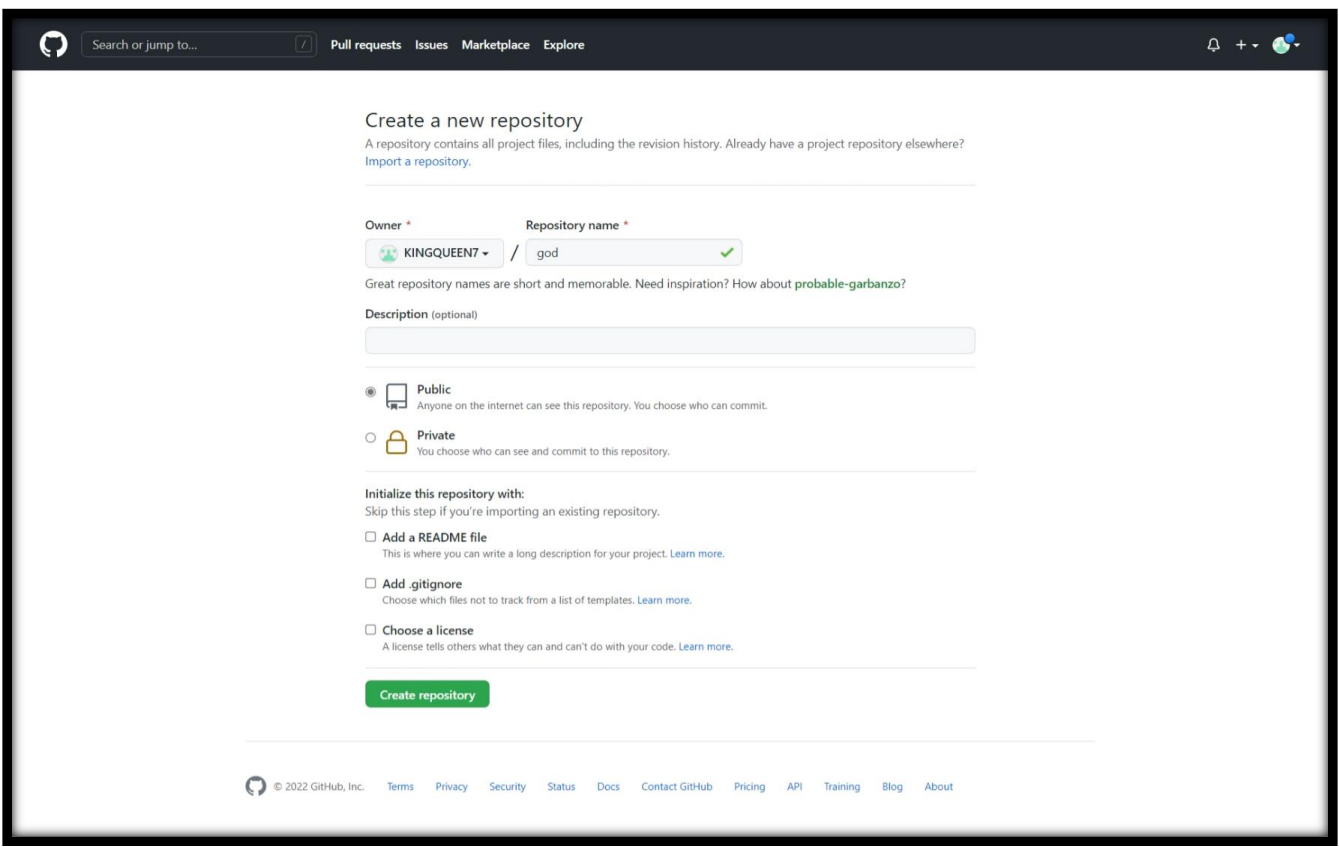

Create account repository on Github and cloning repository in Github page

STEP 1: Go to CHROME create a account on GITHUB.COM

STEP 2: Click on new repository

STEP 3: Enter repository name as god

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner ^{*} Repository name ^{*}

 KINGQUEEN7 / god 

Great repository names are short and memorable. Need inspiration? How about [probable-garbanzo?](#)

Description (optional)

☒  **Public**
Anyone on the internet can see this repository. You choose who can commit.

☐  **Private**
You choose who can see and commit to this repository.

Initialize this repository with:
Skip this step if you're importing an existing repository.

☐ **Add a README file**
This is where you can write a long description for your project. [Learn more.](#)

☐ **Add .gitignore**
Choose which files not to track from a list of templates. [Learn more.](#)

☐ **Choose a license**
A license tells others what they can and can't do with your code. [Learn more.](#)
